

## Water Calypso

Now let me tell you something about water,  
Cause if you don't know by now then you ought to,  
We all need it so we think it's great,  
And it can even change its state.

### Chorus

EVAPORATION – gas – it's part of the air  
CONDENSATION – cools – then a liquid is there  
PRECIPITATION – falls – it goes to the ground  
The Water cycle goes round and round

Did you know that water is around us?  
Vapour in the air or down on the ground as  
puddles that can vanish in the sun or the breeze  
But watch the water freeze at zero degrees

### Chorus

EVAPORATION – gas – it's part of the air  
CONDENSATION – cools – then a liquid is there  
PRECIPITATION – falls – it goes to the ground  
The Water cycle goes round and round

Water can be solid when it's frozen as ice  
which melts into liquid when the temperatures rise  
When it boils it makes steam as it turns into gas  
Reversible changes of state don't last.

chorus

EVAPORATION – gas – it's part of the air

CONDENSATION – cools – then a liquid is there

PRECIPITATION – falls – it goes to the ground

The Water cycle goes round and round

EVAPORATION – gas – it's part of the air

CONDENSATION – cools – then a liquid is there

PRECIPITATION – falls – it goes to the ground

The Water cycle goes round and round
